

Southeast New England Program Network

About the Network

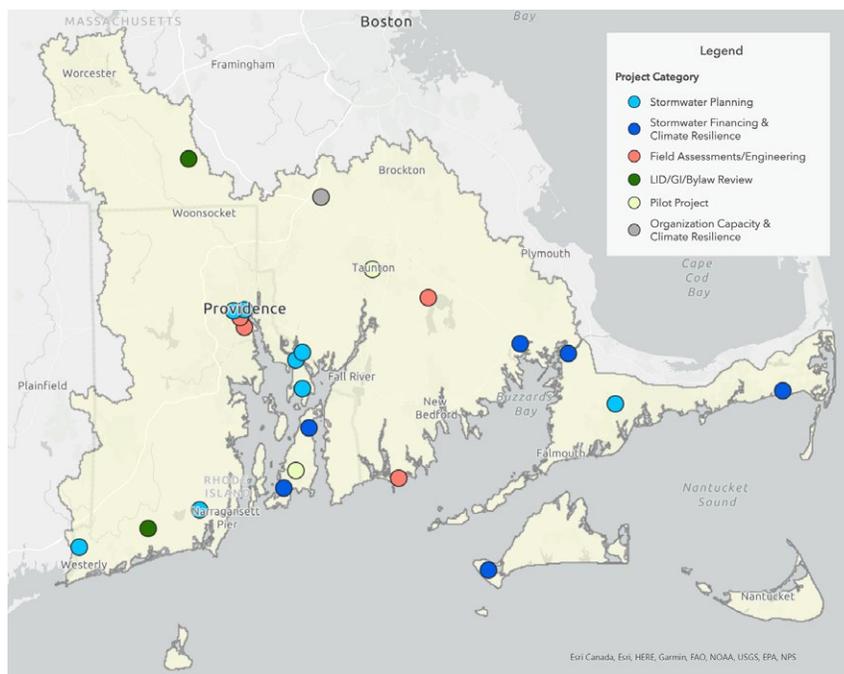

The Southeast New England Program (SNEP) Network, created in 2018, consists of 16 different partner organizations with expertise in stormwater and watershed planning, management, and financing, with a focus on leadership development and climate resiliency. The Network's mission is to empower communities within the region to achieve healthy watersheds, sustainable financing, and long-term climate resilience through management of stormwater and restoration projects.

What We Do

The Network offers a full complement of **free** training and leadership development, technical assistance, and financial services to advance the practice of stormwater and watershed management, and strengthen the capacity of municipalities, organizations, and tribes within the SNEP region.

Our Projects

The Network works on community projects with focuses in stormwater management, watershed management, ecological restoration, climate resilience, and sustainable financing.

Projects include:

- River and riparian buffer restoration in the Maidford River watershed
- Development of a stormwater retrofit manual
- Stakeholder engagement and prioritization in the Canoe River aquifer
- Sustainable financing strategy for economic redevelopment, resilience, and green infrastructure in downtown Wareham Village

See more projects at:

snepnetwork.org

How can my community engage with the Network?

1. Identify your community's watershed, stormwater management and financing, or climate resilience needs.

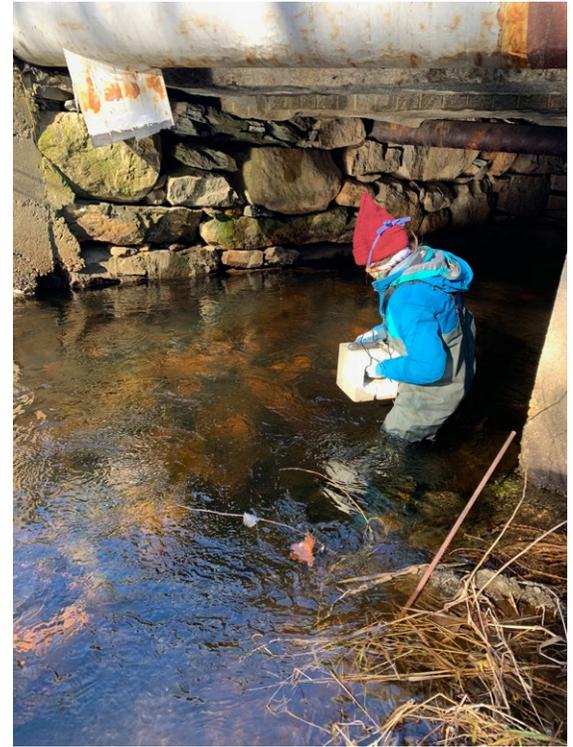

2. Fill out our online assistance form to connect with your state Network liaison: snepnetwork.org/assistance-form

3. Your Network liaison will follow up and work with you to further discuss the needs of your community.

4. Your Network liaison will recommend next steps to continue working with the Network or point to other resources and opportunities in the region. **All services provided for free.**
